UCAB – User Journey Documentation (Cab Booking System)

This document explains the user journey for the UCAB cab booking application.
The journey describes what a typical user experiences when using the UCAB platform, from discovering the application to booking a cab, completing the ride, and interacting with the platform after the ride. The explanation is written in simple English so that students and instructors can easily understand the process.

The journey is divided into five stages:
1. Entice – How users discover the platform
2. Enter – When users start using the platform
3. Engage – The main cab booking and ride experience
4. Exit – Completing the ride and payment
5. Extend – What happens after the ride

1. ENTICE – Discovering the UCAB Application

Steps:
Users usually discover UCAB when they need a quick ride to travel somewhere.
They may hear about the app from friends, social media, advertisements, or when searching online for cab booking services.

Interactions:
The user interacts with advertisements, website links, or app store pages where UCAB is available.

Things (Digital Touchpoints):
Google search results, social media posts, UCAB website, or Google Play Store / App Store.

Places:
Users usually discover the platform at home, office, or while planning travel on their phone or laptop.

People:
Friends, family, online reviewers, or advertisements introduce the app to the user.

Goals and Motivation:
Users want a fast and reliable way to book a ride.

Positive Moments:
Users feel excited when they find a simple app that can help them book a ride quickly.

Negative Moments:
Users may hesitate if they are unsure about pricing, safety, or reliability.

Areas of Opportunity:
Provide clear information about fares, driver safety, and customer reviews to increase user trust.

2. ENTER – Starting to Use the Application

Steps:
The user opens the UCAB website or mobile application and logs in or creates a new account.

Interactions:
Users enter personal information such as name, email, phone number, and password to create an account.

Things (Digital Touchpoints):
Login page, registration form, and authentication system.

Places:
Users interact with the system through their mobile phones, tablets, or laptops.

People:
At this stage the user interacts mainly with the application interface.

Goals and Motivation:
Users want to quickly access the system so they can book a ride.

Positive Moments:
Simple login and fast loading screens improve the user experience.

Negative Moments:
Users may become frustrated if the login process is slow or confusing.

Areas of Opportunity:
Improve login speed, allow social login options, and provide easy password recovery.

3. ENGAGE – Booking and Taking the Ride

Steps:
The user enters the pickup location and destination location.
The system shows available drivers and estimated fares.
The user selects a cab type and confirms the ride request.

Interactions:
The user interacts with the booking form, map interface, and ride confirmation screen.

Things (Digital Touchpoints):
Maps for location selection, fare estimation system, ride request button, and driver details.

Places:
The user may be at home, work, airport, or any location where they need transportation.

People:
Users interact with the driver once the ride is accepted.

Goals and Motivation:
Users want to book the nearest cab quickly and reach their destination safely.

Positive Moments:
Seeing nearby drivers and estimated arrival time makes the process convenient and reassuring.

Negative Moments:
Sometimes users may not find drivers immediately or prices may increase during peak hours.

Areas of Opportunity:
Improve driver matching algorithms and provide more accurate fare estimation.

4. EXIT – Completing the Ride

Steps:
The driver arrives at the pickup location and the ride begins.
After reaching the destination, the ride ends and the payment is processed.

Interactions:
Users confirm payment through saved payment methods such as digital wallet, card, or UPI.

Things (Digital Touchpoints):
Payment gateway, ride completion screen, and receipt generation.

Places:
The ride starts at the pickup location and ends at the destination chosen by the user.

People:
Users interact directly with the driver during the ride.

Goals and Motivation:
Users want a smooth and safe ride experience with easy payment.

Positive Moments:
Quick payment processing and receiving a digital receipt increases user satisfaction.

Negative Moments:
Users may face delays, traffic issues, or payment errors.

Areas of Opportunity:
Improve payment reliability and provide better route optimization.

5. EXTEND – After the Ride Experience

Steps:
After the ride, users can rate the driver and write a review.
The ride also appears in their booking history.

Interactions:
Users interact with the rating system, review form, and ride history dashboard.

Things (Digital Touchpoints):
User profile page, ride history section, and notification system.

Places:
Users typically leave reviews from their mobile phones after completing the ride.

People:
Users may communicate feedback to the platform support team if needed.

Goals and Motivation:
Users want to share feedback about their ride experience.

Positive Moments:
Easy review options and viewing past rides help users track their travel history.

Negative Moments:
Users may feel tired of filling long feedback forms.

Areas of Opportunity:
Simplify the review process and offer personalized ride recommendations or discounts for future rides.
